Executive Summary

BITCOIN WEB3 Coin is a unique and innovative self-deflationary bep-20 based crypto token based on Binance Smart Chain. Buy and Hold BITCOIN WEB3 Coin and you will automatically get more in your wallet. No need to farm, stake or claim.

Each trade also automatically adds liquidity on Pancakeswap leading to an ever-increasing price floor of BITCOIN WEB3 Coin. This means that even if every single BITCOIN WEB3 Coin holder sells, the price will not go to zero.

- Community driven project

Though the core development team is always working on BITCOIN WEB3 Coin it is the community who can guarantee its success. On Telegram, Facebook, Instagram, TikTok, Reddit and other social media channels, our awesome community is spreading the word about us.

- Rewards holders through static reflection

Our tokenomics incentivize holding. We like to say "we pay you to hold". 5% of each transaction goes instantly and gaslessly to the BITCOIN WEB3 Coin holders, proportional to their holdings

- Automatic Liquidity

5% automatically adds to pancakeswap liquidity and is locked forever

- The Only acceptable Coin At BITCOIN WEB3 App Platform

Buy & hold BITCOIN WEB3 Coin and all of these coins can be utilized at the revolutionary online gaming platform based on blockchain which solves major issues faced by online gaming industries specially Online Casino Community And Price Prediction Games Communities.

About BITCOIN WEB3

Although the popularity of online gaming is as strong as ever, online users have encountered many problems trying to play the game they are passionate about. The problems are complex and varying, but we would estimate, based on our market knowledge and anecdotal evidence, that about 50% of the market has been lost due to these issues. The major reason has been the closure (or ring fencing) of large markets around the world due to regulation, strict and less flexible payment providers and the change of legal status for **casino games** and **prediction games** in some countries. As online gaming also relies on network effects, the reduction in player liquidity has reduced the healthiness of the overall gaming ecosystem. Even regions that have not been affected by regulation, have been impacted by the reduction in **player liquidity** in other markets.

In addition to **regulatory issues**, the industry has done itself no favors! There have been numerous gaming room scandals that have harmed the reputation of online gamers as well as fraud attempts, security and transparency issues with game logic, bureaucracy surrounding online gaming accounts and a lack of security, causing reduced trust in online gaming specially **casino games**. The flow-on effect is that casino games has largely gone offline, either via legal gaming rooms or underground illegal rooms which have all gained in popularity.

We have analyzed online gaming from a geographical perspective and mapped out a summary on how we see the current landscape, pointing out potential growth regions taking into our account our blockchain application can address the **aforementioned issues**.

Gaming

Blockchain can take the gaming industry a step further. Blockchain in the gaming industry can provide transparency, can provide assets earned by the gamer.

They could even port them between different games, opening up new avenues of value for the sector. Decentralization could help smaller developers wrest control from the small handful of big gaming studios that dominate the space.

Therefore, application-specific blockchains are what's necessary to create a successful marriage of blockchain and gaming. However, to take it a step further, we need to ensure that individual games can continue to have different economic incentives.

Therefore, basing a single game on a single blockchain is the only way to make sure that we can address the gap. In the blockchain, the accounts of the players can be easily verified and can be incentives in real-time.

The BITCOIN WEB3 Coin can be distributed to the NFT holders. Our vision is to provide a platform for gamers across the world, where they can actually own the assets earned by them and provide an environment where they can have a healthy competition and build an exciting community for them.

NFT (Non-Fungible Token)

NFT stands for **non-fungible token**, which basically means that it's a one-of-a-kind digital asset that belongs to you and you only. The most popular NFTs right now include artwork and music, but can also include videos and even tweets.

At a very high level, most NFTs are part of the Ethereum blockchain. Ethereum is a cryptocurrency, like bitcoin or dogecoin, but its blockchain also supports these NFTs, which store extra information that makes them work differently from, say, an ETH coin. It is worth noting that other blockchains can implement their own versions of NFTs.

NFTs can really be anything digital (such as drawings, music, your brain downloaded and turned into an AI), but a lot of the current excitement is around using the tech to sell digital art.

NFTs are designed to give you something that can't be copied: ownership of the work (though the artist can still retain the copyright and reproduction rights, just like with physical artwork). To put it in terms of physical art collecting: anyone can buy a Monet print. But only one person can own the original.

Metaverse

Metaverse is a **virtual or semi-virtual world** that can be accessed using Virtual and/or augmented reality headsets, each giving a different experience.

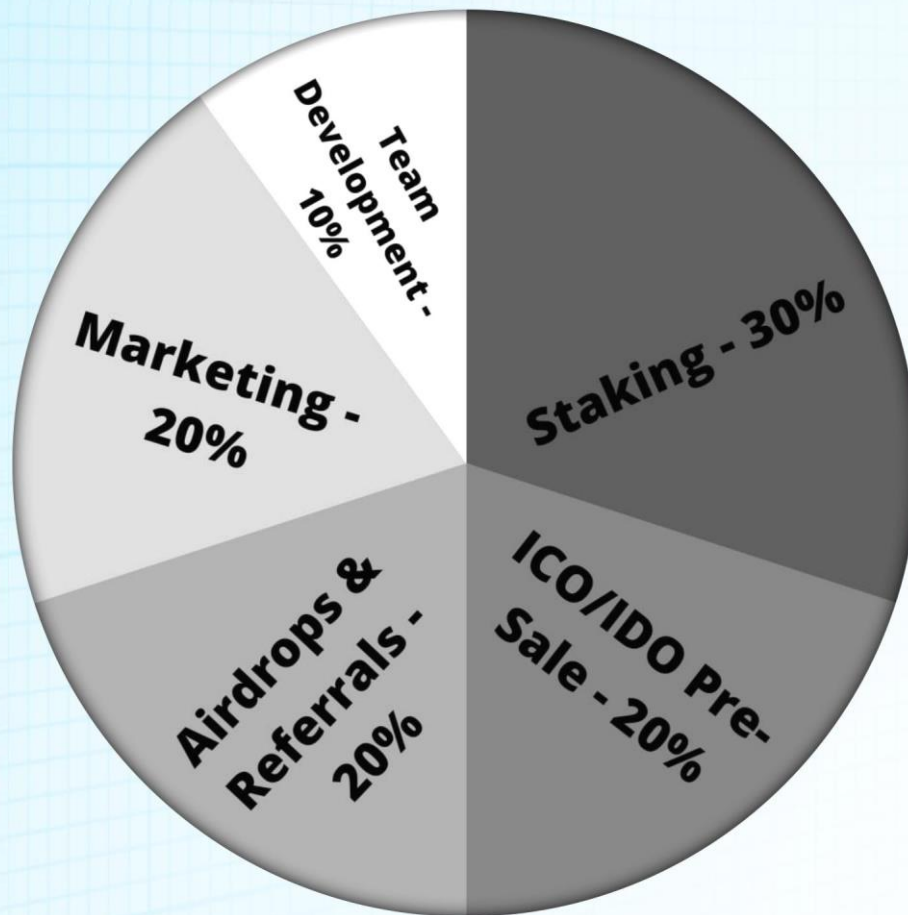

Metaverse is the **hypothesized next iteration of the internet**, supporting decentralized, persistent online 3D virtual environments. It is a virtual world that is accessible via a virtual-reality headset, augmented-reality glasses, smartphones, PCs, and game consoles.

The metaverse is the next evolution of social connection. Our company's vision is to help bring the metaverse to life, so we are changing our name to reflect our commitment to this future.

3D spaces in the metaverse will let you socialize, learn, collaborate and play in ways that go beyond what we can imagine. Listen to Mark Zuckerberg share our vision for bringing the metaverse to life together.

Tokenomics

Total Supply - 21,000,000

Staking - 30%
ICO / IDO Pre-Sale - 20%
Airdrops & Referrals - 20%
Marketing - 20%
Team Management - 10%

Major Problems

You are not in control of your funds !

One of the key problems identified above is that confidence has been lost in the deposit and withdrawal process which is the pillar of any online gaming system - put simply you are not in control of your own funds! If you transfer money to an international casino room, or cash out winnings, you are often at the mercy of the payment processor, casino rooms or bank's bureaucracy as to the timing of those funds, if they get processed at all. There are increasing KYC requirements, blocking of transactions and in some cases accounts have been banned and funds frozen or confiscated altogether. Impacts vary on a region by-region basis, with some regions unable to transfer outside their country at all, or customers face charges from between 7 and 12 % to facilitate these transactions by third party brokers, often acting in black markets.

The technology is not transparent !

The lack of transparency in technology has been the number one concern around online gaming is game integrity and fairness. It's been the number one question since online gaming began and the number one thing complained about by gaming communities across the world. Blockchain can solve this problem! Their concerns range across different issues. One of their first concerns is whether random number generators (RNGs) in casino games are truly random or could be exploited. Until now, this has never been fully resolved and remains an area of distrust.

Game integrity fears reached fever pitch during the Absolute online casino scandal when it was uncovered that there was systematic cheating via a backdoor entry that allowed some accounts to see other players hold cards. The icing on the cake was the Ponzi scheme How many millions were lost during this scandal? The above-mentioned examples are some "highlights" of what has been a "troubled" past for the industry, but there are other examples, which are too numerous to mention.

Major Problems

Withdrawals are still problematic despite technological advances!

Even if you are playing at a reputable room with a fair game, problems exist around payment processing. The timeframe for withdrawals takes at least two full days and much longer in some regions. With smaller networks that have less established payment processing solutions, withdrawals can take weeks, even months. Some gaming rooms still send a cheque in the mail! It seems every area of internet games has had significant progress over the last decade except payment processing; which has perhaps gone backwards. This reduces trust in online poker and demotivates players. While players are waiting for withdrawals to be processed, they often lose the funds playing casino games as well.

Sharks swallow fish!

Given that online casino gaming is regarded as a game of skill, another issue with online casino games is that “smart” money tends to dominate recreational players resulting in a high burn rate for the recreational segment of the market. If recreational players are nurtured well from the outset then they become loyal participants and add significantly to the ecosystem, but managing new players is essential. Smart money comes in a range of formats. The “ethically” based players that have developed a high level of skill in the game and the “unethical” or shady side of the industry including algorithmic/machine learning bots that prey on recreational players and teams colluding by having more than one player at a table.

In fact, the online poker scene has matured significantly and the combination of the above factors means that recreational players have never been at a greater disadvantage. Winning accounts are often fueled by rakeback incentives and other loyalty based promotions further exacerbating their advantage. The knowledge gap between recreational and smart money has been a driving force killing of liquidity for many years. It’s been a significant reason for the plateauing of online poker.

How BITCOIN WEB3 Along with BITCOIN WEB3 Coin can tackle these problems

The blockchain revolution has the potential to solve the key challenges identified above. It's perhaps the biggest hope for the future of the industry. BITCOIN WEB3 App is an online gaming platform which uses a fully decentralized programmatic set of smart contracts using advanced blockchain technologies via Ethereum and other blockchain technologies like Binance Smart Chain. These processes will help eliminate/limit the major online gaming problems we are facing today.

Crypto Currency Based Online Gaming Platform

BITCOIN WEB3 Coin will operate on Binance smart contract based cryptocurrency protocols and will introduce a new cryptocurrency called a BITCOIN WEB3 Coin. The most important advantage of using our BITCOIN WEB3 Coin cryptocurrency is you can buy it online no matter what geographic region you reside in. The second advantage is the speed of processing. Players can fund or withdraw from their BITCOIN WEB3 Coin account instantaneously. As a consequence the BITCOIN WEB3 Coin has enormous utility.

The BITCOIN WEB3 Coin will be available globally and can be purchased and tradable via reputable third party exchanges regardless of the jurisdiction of the purchaser; however, the BITCOIN WEB3 Coin can only be used on the BITCOIN WEB3 Coin platform from places where it is legally permissible to do so. But one can swap it to exchange it with BNB Coin. In other words, the BITCOIN WEB3 Coin can be used to play all the games on the BITCOIN WEB3 Coin Platform by any person who has rightful possession of the BITCOIN WEB3 Coin and is situated in a Permitted Jurisdiction. Permitted Jurisdictions, include (a) jurisdictions where Online Casino Game is legal because it is considered a game of skill; (b) Jurisdictions where Online Casino is licensed by a legitimate authority, or (c) Jurisdictions where Online Casino is not governed by the laws of the jurisdiction where the person is situated.

This process addresses two of the major concerns identified above. It opens up previously closed geographical markets and bypasses banks, e-wallets and other third-party brokers who create distrust in the online gaming community and cause payment delays. Below you will find a depiction that demonstrates how the BITCOIN WEB3 Coin will flow through the BITCOIN WEB3 App ecosystem.

Anonymity

Smart contracts will guarantee the token holders' anonymity and safety. Backed by solid legal opinions worldwide, the gaming room will operate with maximally simplified registration process, avoiding redundant user personal data collection

5% Back To Community

Although there are obvious benefits to a blockchain gaming site, the most important element to success is providing as much value to customers as possible to players. Every month no less than 25% of the revenue raised will be returned to the community through various promotions including rake races, daily tournaments, jackpots etc. This is very important part of this project as these tools will ensure player loyalty through rewards.

Not only that, these monthly contributions will reach players pockets and keep tokens circulating for a significant time period:

- **Daily and Weekly Tournaments** : Each day we will schedule tournaments with additional BITCOIN WEB3 Coin bonuses added.
- **Leaderboards** : Leaderboards will award active recreational players.
- **Jackpot** : After development of this feature we're going to contribute 15% of our monthly revenues to jackpots.
- **Bounties** : Through various promotions we will reward players who will bring other players to the network (refer-a-friend). In addition to this, we will reward players who play in our play money app version before the ICO with real BITCOIN WEB3 Coin coins.

• **Loyalty Program** : After development of loyalty program, players will be able to earn points from various games and limits.

Why You Should Buy Our BITCOIN WEB3 Coin & Hold It

Holders of BITCOIN WEB3 Coin post ICO will benefit from an automatic increase in the price of BITCOIN WEB3 Coin not only as demand for coins increases but because of a unique BITCOIN WEB3 Coin Algorithm, price of the coin will go up automatically as on every transaction 5% of the transaction will automatically added to liquidity and will be locked forever. Not only this 5% will also be distributed among holders based on their holding percentage.

The only way for any gaming fan to play at BITCOIN WEB3 App is to buy coins at market rates. If the site grows, as outlined above, so will the price of BITCOIN WEB3 Coin coins, this will result in more utility and use on the platform. BITCOIN WEB3 App will release **21 Million** BITCOIN WEB3 Coin tokens into the market and this amount will be fixed.

Newcomers to the site after ICO, or those who have lost and need to chip up again, will need to buy additional BITCOIN WEB3 Coin. To do this, they will need to buy BITCOIN WEB3 Coin on the exchange from holders of BITCOIN WEB3 Coins looking to cash out, these transactions are done at market rates.

This structure of fixed supply and increasing demand will cause the price of BITCOIN WEB3 Coin to rise facilitating a significant return-on-investment for early adopters giving them more playing power on the BITCOIN WEB3 App Network. Here's simple example: if there's 1,000 coins in the market spread evenly between 20 players with 50 coins each.

Statistically if 5% of casino players are winners in online gaming, eventually all the coins will end up in one player's wallet. So the remaining 19 players will have to buy additional tokens in order to play and this demand will increase the value of all tokens.

ROADMAP V1.0

- i. Web 3.0 Launching
- ii. Start World Wide Promotion
- iii. White Paper Release
- iv. BTCWEB3 ICO Start

Q1 - 2022

Q2 - 2022

- i. Fund Rising Will Be Done
- ii. R & D Center Will be Established
- iii. Core Team & Primary Funding Ready.

- i. Corporate Office Will be Established
- ii. Extensive Marketing Campaign Will Be Launched World Wide.
- iii. Android Mobile Trading App Will Be Launched.

Q3 - 2022

Q4 - 2022

- i. Centralised Crypto Exchange Web Platform Will Be Launch.
- ii. Major Crypto pair Will be added For Trading
- iii. Margin Trading & Fiat Deposit Will Be

- i. iOS Trading App Will be Launched.
- ii. Copy Trading App Will be Release .
- iii. Additional Advance Features Will be Released.

Q1 - 2023

Q2 - 2023

- i. DeFi Platform Will be Launched.
- ii. Analytic Features will be released
- iii. NFT Market Place Will be Launched.

i. Own Blockchain Will Be Launched.

Q3 - 2023

Q4 - 2023

i. Metaverse Platform Will Be Launched.

ROADMAP V2.0

- i. Press Releases with Major News Outlets
- ii. Metaverse Concept Artwork
- iii. Viral marketing campaign

2024

2025

- i. Social Media Channels Including Paid
- ii. Metaverse Live Testing
- iii. BTCWEB3 Own Blockchain

- i. Event Bookings Start
- ii. Community Building on Discord
- iii. Metaverse Goes Live

2026

2027

- i. Webinars & Conferences
- ii. Advertising Campaigns
- iii. Introduce our BTCWEB3 Game Concept

- i. BTCWEB3 Game Testnet Live
- ii. Use Of Influencers in Crypto, Gaming
- iii. Metaverse Events Such as Concerts & Exhibitions

2028

2029

- i. BTCWEB3 Game Mainnet Launch
- ii. Launch Decentralised Wallet
- iii. Multi Blockchain Integration
- iv. Sponsorship Of Industry Events, Sports, Culture

Important Considerations

The health of the BITCOIN WEB3 App Platform and all technical developments are subject to changes in the interpretation, application and regulation of gaming laws in multiple jurisdictions around the world. Sudden changes can impact the utility and value of the coin and the health of the BITCOIN WEB3 App network. Although this document details the BITCOIN WEB3 App Platform and its functionality, the BITCOIN WEB3 Coin coin is not limited to use only on this platform.

The value of the coin will depend on the health of the platform and the adoption of its use by the general public, which can be impacted by many factors that are beyond the control of BITCOIN WEB3 App. As such, neither the BITCOIN WEB3 App, nor the BITCOIN WEB3 Coin make any representation as to the health of the BITCOIN WEB3 App economy whatsoever. In addition, the ability to trade the coin outside of BITCOIN WEB3 App may be impacted by third parties and their trading policies.

Again, this is beyond the control of BITCOIN WEB3 Coin and neither BITCOIN WEB3 Coin nor BITCOIN WEB3 App have any obligations related to the external trading of the coin. Please be advised that this document was originally drafted in the English language. Consequently, and without limitation, this original English language version shall prevail in the event that there are any inconsistencies, conflicts or uncertainties, of any kind whatsoever, between the original English version and any version translated into any other languages whatsoever.
